

Digital interpretation systems: Taiden and Bosch NG

We offer a full range of simultaneous interpretation services utilizing the latest, state-of-the-art equipment.

TAIDEN digital receivers are the most advanced in the world while also being the most user friendly. Their large, easily readable LCD screens display information on transmission power, battery and volume levels, channel number, as well as the language of interpretation - a unique feature which makes finding the desired interpretation substantially easier - in particular during multilingual conferences.

TAIDEN receivers are fully compatible with other digital systems used in Europe. The received digital transmission is completely free of interference from modern lighting systems. In addition, interpretation may be conducted in locations inaccessible to analogue infrared systems, for example, sunlit spaces, open air etc.

In addition, our systems include the newest generation of BOSCH NG equipment characterized by fully digital interpreting units housing large, clear display screens. We are able to provide interpretation in as many as 32 languages which can be conducted in multiple locations at the same time. This gives us the flexibility to adapt interpreter booths to satisfy individual requirements of both interpreters and customers. The systems are fully compliant with the IEC 61603 and IEC 60694 international standards for interpreting equipment, as well as the European Commission's norms for conference infrastructure (ISO 2603-1998, ISO4043-1998).

Our offer also includes:

- **TAIDEN digitally controlled discussion system** intended for meetings and gatherings which allow the participants to communicate with each other by means of microphones and built in loudspeakers or personal headphones.

- **Qomo voting systems** which facilitate the voting process, shortening its time to a minimum while the results can be followed in real-time thanks to visualisation in the form of tables and graphs.

- **TourGuide INFOPORT system**, a mobile solution which can be employed for conducting factory group tours of production floors and assembly lines, as well as guided sightseeing tours. The system may also be used to assist in performing chuchotage (whispered interpreting).

- Digital audio and video recording systems provide an opportunity for capturing important events for the future. Our offer includes filming of conferences and conventions including live coverage. We can also provide audio-video transmission to additional sites.
- Highly reliable sound systems custom fit to location's size, number of participants and the form of meeting ensure excellent sound quality and clarity of speech. We particularly recommend multipoint sound systems based on products of leading manufacturers (JBL, PHILIPS) and outstanding quality microphones by such top producers as AKG, MIPRO, SENNHEISER or SHURE.
- Equipment for all types of presentation visualizations: extensive range of multimedia projectors, large sized front and rear projection screens, various plasma display panels and wall screens, as well as control stations with a wide range of diverse effects. We also offer the latest in 3D PROJECTION technology !
- Video conference terminals which make it possible to bring together into a single place and time conversation participants scattered in various locations.

We are looking forward to doing business with you!
